

Physical Health Indicators

Physical health indicators: Measures health outcomes related to land reuse and redevelopment.

Indicator	Definition	Data Source
Blood lead level (pre- and post-redevelopment)	Concentration level of lead in blood samples pre- and post- redevelopment	CDC's National Surveillance Data State Programs
Pre- and post-redevelopment local Health Data: (e.g. vital and health statistics, such as infant death rate, mortality, chronic diseases, respiratory illnesses, obesity, cancer, other)	Vital statistics for a community (e.g. a state or county) include birth, death, fetal death, marriage, and divorce rates. Chronic disease are conditions that last 1 year or more and require ongoing medical attention and/or limit activities of daily living. Examples include heart disease, cancer, and diabetes. CDC provides defines chronic disease indicators, including cardiovascular disease (high blood pressure, heart disease, stroke, other) here: https://www.cdc.gov/cdi/definitions/cardiovascular-disease.html	National Center for Health Statistics Individual state data Example of health data for Colorado
Pre- and post-redevelopment demographic data to characterize health disparities (e.g. county health rankings, vital statistics)	Health disparities are preventable differences in the burden of disease, injury, violence, or in opportunities to achieve optimal health experienced by socially disadvantaged racial, ethnic, and other population groups, and communities. Health disparities exist in all age groups. ¹	County data for individual counties that can be found in Internet searches or through a local/county health agency County Health Rankings
Percentage of population insured below age 65	Percentage of people in a community who have health insurance and are below age 65	United States Census Bureau Small Area Health Insurance Estimates U.S. Census Bureau American Fact Finder and type in the name of the community (select income data, which provides insurance data)
